

Netlist And Ultra-X Enhance High Capacity Memory Testing For Servers In The IT Industry

January 19, 2011

Companies Team Up to Deliver an Enhanced Memory Test Solution Specifically for High-Capacity Memory Server Systems

IRVINE, Calif., Jan. 19, 2011 /PRNewswire/ -- [Netlist, Inc.](#) (Nasdaq: NLST), a designer and manufacturer of high-performance memory subsystems, today announced its alliance with Santa Clara, CA-based [Ultra-X](#), a provider of hardware and software diagnostic solutions for the IT industry. The two companies are working together to deliver an enhanced memory test product that will greatly reduce test session time for High-Capacity server systems. With support from Netlist, Ultra-X's RAM Stress Test (RST) Premium, a memory diagnostic tool designed for the rigorous testing needs of server and memory manufacturers, has been enhanced to significantly reduce test session time while also preserving RST's test coverage.

"Ultra-X is constantly pushing the memory testing barrier to the highest limits," said Tom Anderson, vice president of sales & marketing at Ultra-X. "With Netlist's HyperCloud™ memory module, we were able to push our testing capabilities to higher capacities and speeds which standard memory does not allow. Our latest technology easily handles up to 512GB memory capacity in servers while significantly reducing test times – allowing OEMs, system builders and memory manufacturers to increase test efficiency and lower development costs."

"With Ultra-X RST-Pro now supporting up to 512GB, our mutual customers can accelerate the development of high memory density systems," said Steve McClure, Netlist vice president of worldwide sales and marketing. "With this enhancement, RST-Premium streamlines the test process for high capacity memory systems, establishing HyperCloud as the high density memory module standard."

About Ultra-X

Founded in 1987 and headquartered in the heart of Silicon Valley, Ultra-X is a technology pioneer offering a wide array of hardware and software diagnostic solutions for Developers, Manufacturers, Integrators, Service Technicians and Computer Professionals. Ultra-X products are based on its patented Self-Boot Technology (SBT) ®. Ultra-X's products include the P.H.D. ®, R.S.T. ®, QuickTech®, QuickPOST® and WinStress® (WST™) product families.

About Netlist:

Netlist, Inc. designs and manufactures high-performance, logic-based memory subsystems for datacenter server and high-performance computing and communications markets. Netlist's flagship products include HyperCloud Memory, which breaks traditional memory barriers and NetVault, a flash memory-based subsystem that enables data retention weeks following a disaster. The memory technologies are developed for applications in which high-speed, high-capacity memory, enhanced functionality, small form factor, and heat dissipation are key requirements. These applications include tower-servers, rack-mounted servers, blade servers, high-performance computing clusters, engineering workstations, and telecommunication equipment. Founded in 2000, Netlist is

headquartered in Irvine, California with manufacturing facilities in Suzhou, People's Republic of China. For more information, visit the company's website at www.netlist.com.

Safe Harbor Statement:

This news release contains forward-looking statements regarding future events and the future performance of Netlist. These forward-looking statements involve risks and uncertainties that could cause actual results to differ materially from those expected or projected. These risks and uncertainties include, but are not limited to, continuing development, qualification and volume production of NetVault™ NV and HyperCloud™; the rapidly-changing nature of technology; risks associated with intellectual property, including the costs and unpredictability of litigation over infringement of our intellectual property and the possibility of Netlist's patents being re-examined by the United States Patent and Trademark office; volatility in the pricing of DRAM ICs and NAND; changes in and uncertainty of customer acceptance of, and demand for, our existing products and products under development, including uncertainty of and/or delays in product orders and product qualifications; delays in the Company's and its customers' product releases and development; introductions of new products by competitors; changes in end-user demand for technology solutions; the Company's ability to attract and retain skilled personnel; the Company's reliance on suppliers of critical components; fluctuations in the market price of critical components; evolving industry standards; and the political and regulatory environment in the People's Republic of China. Other risks and uncertainties are described in the Company's annual report on Form 10-K, dated February 19, 2010, and subsequent filings with the U.S. Securities and Exchange Commission made by the Company from time to time. Except as required by law, Netlist undertakes no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.
